# COncORDE

## Coordination Mechanisms For Medical Emergency Response

The COncORDE project aims at designing and developing a web-based platform to support and enhance the existing coordination and decision processes during small or large-scale medical emergencies, at local, regional and cross-border level.

The platform will improve the operational information flow within the emergency medical services, as well as the communication and coordination between people requiring emergency medical help, the responders and a resilient community. The ability to capture the flow of the response to an incident, evaluate it, perform audits and use to train professionals is expected to significantly impact on the preparedness of a community, as well as on the accumulation of evidence for best practices.

**ACT FAST**

**BE SMART**

**SAVE LIVES**
